IL RISO n° 4 del 11 agosto 2015

Difesa dal brusone del riso

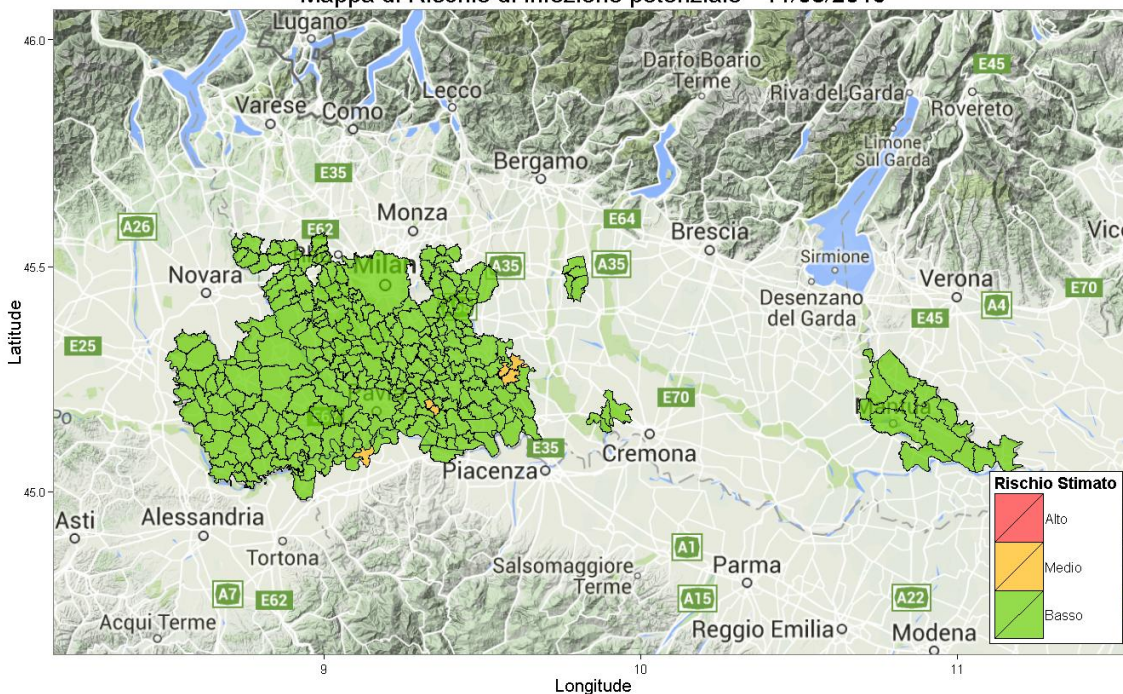

Facendo seguito a quanto comunicato nel precedente bollettino n.3 del 4 agosto si riporta l'indice di rischio di infezione potenziale all'11 agosto 2015.

Indice che illustra quanto le condizioni meteorologiche giornaliere siano favorevoli ad eventi di infezione da Brusone. Stime effettuate a partire da simulazioni condotte con il modello WARM per il periodo 08/08/2015 - 14/08/2015

Per ciascun comune, il rischio riportato e' la media dei valori stimati su celle di 2x2 km all'interno del comune. Il valore di *Rischio Aggregato* corrisponde alla media stimata in un intervallo di piu' o meno 3 giorni rispetto alla data corrente.

In fondo al bollettino si trova la **Guida alla lettura delle informazioni riportate**

Andamento per Comune

Per ciascun comune dell'area risicola lombarda, viene riportato il rischio aggregato stimato per la settimana, insieme all'andamento del rischio stimato nel periodo di più o meno tre giorni dalla data corrente. I grafici illustrano l'andamento giornaliero del Rischio Stimato (Si tenga presente che le stime per i giorni futuri sono basate su previsioni meteorologiche, inevitabilmente soggette ad errore).

Guida alla lettura delle informazioni riportate

Nelle figure 1 e 2, a titolo esemplificativo sono riportati degli esempi di come sono presentate le informazioni prodotte dal sistema di allerta. In Figura 1 è rappresentata la mappa di sintesi dei comuni risicoli lombardi e del relativo indice di rischio potenziale aggregato per il periodo di 7 giorni centrato sulla data di emissione del bollettino. In Figura 2 è invece rappresentato un esempio della situazione giornaliera stimata per un singolo comune, dalla quale si può osservare come complessivamente il rischio aggregato sia di gravità media, nonostante nel giorno di emissione del bollettino e in quello precedente il rischio sia valutato come di gravità elevata.
